Side effects and complications

Anesthesia is not an intervention without danger so despite the most up-to-date equipments and medication it can have side effects and complications there are though very rear. We are obligated to draw your attention to these.

Frequently:

- Bleeding, swelling, pain on the spot of the venous injection
- Skin redness from the plastic tape
- Headache, temporary disturbance of the sight, temporary confusion
- Nausea, vomiting
- Dry throat, hoarseness, coughing

Rearly:

- Injury, swelling of the lip
- Repeated venous injection
- Allergic reaction
- Difficulties in securing of airways
- Temporary oxygen defficiency
- Aspiration, coughing

Very rearly:

- not feasible securing of airways
- spastic blocking of the airways
- Pneumonia due to aspiration
- Heart rhythm disturbancies, cardiac standstill
- death

Go on dreaming, while we do the work.
